INSTRUCTION FOR FARMERS
BY EXTENSION SCHOOL.

Sessions Continue at Preston City—Topics for Men and Women.

The second day of the extension school being held at Preston City in co-operation between the extension service of the Connecticut Agricultural college, the New London county improvement league and the people of Preston opened on Wednesday at 9 a. m. with N. H. Hall as the presiding officer. About 25 were present in the men's department and about the same in the women's department.

In the men's department a discussion on the value and care of farm manures was led by B. G. Southwick of the agronomy department of the Connecticut Agricultural college. He showed how the liquid animal excreta contains one-half the total nitrogen and two-thirds of the total potash voided by our farm animals. The careful saving of all liquid manure is of utmost importance this year, as potash cannot be obtained for fertilizer.

The value of manure is lost by letting the urine drain away by leaching caused by rains and by fermenting. Mr. Southwick said the best care of manure means first, saving every bit of the liquid as well as the solid manure by using plenty of bedding; second, storing the manure under cover where it cannot be touched by the sun, making a compact pile to keep out the air and retard rotting; fourth, keeping the manure pile damp for dry manure rots more rapidly.

The variation of fertilizing value of different common seeds was also explained by Mr. Southwick.

Dairy Matters.

The remainder of the morning was given over to a demonstration of the Babcock butter fat test and some methods of dairy arithmetic. The latter are often found useful. This was led by K. B. Musser, extension dairyman of the Connecticut Agricultural college.

An excellent manure system was discussed and Mr. Musser gave reasons for keeping records in the dairy.
